

## How to Update your Internet Explorer Browser

SpiritLive works best with Microsoft Internet Explorer versions 5.5 or above. Before you use SpiritLive, you should make sure your computer is running Internet Explorer 5.5 or above.

### To find out if you have Explorer 5.5 or above:

1. Open your Internet Explorer Browser
2. Click on the button at the very top of the window that is titled "Help"
3. Under "Help" select "About Internet Explorer"

The box that appears should tell you what version of Explorer you have. If it says Version 5.5 or above, you're all set.

*If it says Version 5.0 or lower, you'll need to upgrade your browser.*

### This is how you upgrade your browser:

*Note: If you have an IT administrator or coordinator for your parish or organisation, it is best to get their assistance before updating Internet Explorer on your computer.*

1. Go to the Microsoft Windows update site at <http://windowsupdate.microsoft.com> (there is no "www" in the address)
2. The website will automatically start checking your computer.
3. Click "Ok", "Yes", "Scan for Updates", "Review and Install Updates", "Install Now", "I Accept", "Next" etc., to the boxes that appear.

If you are using a regular dial up modem, it could take *about 45 minutes* for the new version to fully download and install.
